7. ☐ Examiner's Amendment/Comment
8. ☒ Examiner's Statement of Reasons for Allowance
9. ☐ Other _____.

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: The claims are allowable because prior art fails to teach a release mechanism adapted to hold a worm gear in place relative to a shaft that is associated with the worm gear during the normal operation of the saw, and further adapted to release the worm gear relative to the shaft upon detection of the dangerous condition between a person and the blade, in combination with other limitations set forth in claim 19. The prior art also fails to teach that the reaction system includes a compressible busing positioned between the arbor and the blade and configured to allow the blade to retract due to compression of the busing, in combination with other limitations set forth in claim 21. The prior art also fails to teach a restraint to prevent the string from retracting the cutting tool until the detection of the dangerous condition and a release mechanism to release the restraint and the spring to retract the cutting tool, where the release mechanism is triggered upon the detection of the dangerous condition, in combination with other limitations set forth in claim 22. The prior art also fails to teach a band blade for cutting workpieces, and a roller positioned adjacent the blade and configured to retract the blade by pushing against the blade upon detection of the dangerous condition by the detection system, in combination with other references set forth in claim 24.

Regarding claims 19, 21 and 24, Foreign Document DE 19609771, hereinafter DE '771, teaches a table saw giving a circular blade for cutting workpieces; an arbor to support the blade and an arbor block to support the arbor; a detection system adapted to detect a dangerous condition between a person and the blade; and a reaction system to be associated with the detection system and the blade, where the reaction system is configured to retract the

blade at least partially away from the cutting region upon detection of the dangerous condition by the detection system.

However, DE '771 fails to teach a release mechanism adapted to hold a worm gear in place relative to a shaft that is associated with the worm gear during the normal operation of the saw, and further adapted to release the worm gear relative to the shaft upon detection of the dangerous condition between a person and the blade, as set forth in claim 19. DE '771 also fails to teach that the reaction system includes a compressible busing positioned between the arbor and the blade and configured to allow the blade to retract due to compression of the busing, as set forth in claim 21. DE '771 also fails to teach a band blade for cutting workpiece, and a roller positioned adjacent the blade and configured to retract the blade by pushing against the blade upon detection of the dangerous condition by the detection system, as set forth in claims 24.

Regarding claim 22, DE '771 in view of Fonda (1,584,086) teaches a spring to retract the cutting tool at least partially away from the cutting region upon detection of the dangerous condition. However, DE '771 in view of Fonda fails to teach a restraint to prevent the spring from retracting the cutting tool until the detection of the dangerous condition and a release mechanism to release the restraint and the spring to retract the cutting tool, where the release mechanism is triggered upon the detection of the dangerous condition, as set forth in claim 22.

None of these references by themselves or in combination with the other prior art cited teach the claimed invention set forth in claims 19, 21, 22, and 24.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
